

C L A I M S

1.- Registrable modular covering for road  
5 surfaces, intended for the covering of flat  
surfaces, preferably horizontal surfaces,  
characterised by being made up of hexagonal  
sections (2), which have straight and parallel  
greater sides and the four remaining sides are  
10 positioned at the ends two by two at an angle of 90  
degrees and incorporating, together with each one  
of the ends of the lesser sides, a sunken section  
(5) of similar dimensions to a tongue (6) situated  
on the adjacent side, the bodies(2) being  
15 subdivided into two trapezoidal areas by a  
longitudinal projection (4) that incorporates a  
line of longitudinal split.

2.- Registrable modular covering for road  
20 surfaces, as in the first claim, characterised  
because between the elements (2) which make up a  
quadrangular reticle, laminar elements (10) are  
incorporated which make up the covering.
